

# MAMEDA Ryo

Course	Life Science Course (Third-year transfer)
Primary Advisor	Prof. BONO Hidemasa
Internship	CiRA, Kyoto University
Financial Aid	Tuition Waiver of HU WISE Program (since AY 2023)

## Authentic learning, even from remote locations

I started the Frontier Development Program for Genome Editing when I was enrolled in the doctoral course of the Graduate School as a working Ph.D. student living in Osaka. My research topic is the development of analysis methods for next-generation sequencing data. The flexibility of this program was a deciding factor in enrolling. It allows research to be performed remotely and most of the coursework is available on demand online. The tuition waiver program is also a big help. I was involved in genome editing research before enrolling in this program and have always had a strong interest in genome editing. My internship at CiRA, Kyoto University, which is only available through this program, as well as lectures on the ethics of genome editing and presentations at academic conferences, have given me a broader perspective on genome editing.

## A Day In The Life

(Life Science Course / Working Adult)

08:30 | Commute to work

12:00 | Take a course/assignment/perform research activity during lunch break

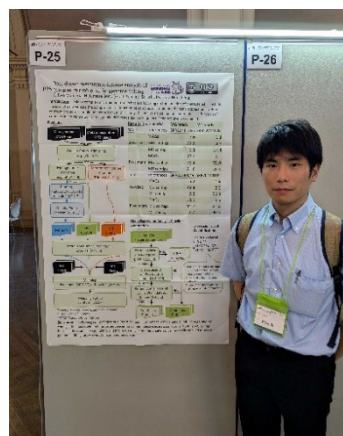

13:00 | Work

19:00 | Home

21:00 | Research

On-demand learning enables the flexibility of time and location.

Research presentation at the Japanese Society for Genome Editing.
